S.E. (Computer) (First Semester) EXAMINATION, 2016

COMPUTER ORGANIZATION AND ARCHITECTURE

(2015 Pattern)

Time : Two Hours **Maximum Marks : 50**

N.B. :— (*i*) Neat diagrams must be drawn wherever necessary.

(*ii*) Figures to the right indicate full marks.

(*iii*) Use of calculator is allowed.

(*iv*) Assume suitable data, if necessary.

1. (*a*) Show the general structure of IAS computer and explain in detail. [6]

(*b*) Explain following cache mapping techniques along with their merits and demerits : [6]

(*i*) Direct

(*ii*) Set associative.

Or

2. (*a*) Perform Division of following numbers using restoring Division Algorithm : [6]

Dividend = 1011

Divisor = 0011.

P.T.O.

(*b*) What is Cache coherence ? What are the solutions to cache coherence problem in single CPU system. [6]

3. (*a*) What are the evolutionary steps of I/O channel ? Explain types of I/O channel ? [6]

(*b*) Explain the following addressing modes with *one* example each :

(*i*) Immediate

(*ii*) Register Indirect

(*iii*) Direct.

Or

4. (*a*) Differentiate between programmed I/O and interrupt driven I/O. [6]

(*b*) What is displacement addressing ? Explain its types with calculation of effective address. [6]

5. (*a*) What are various hazards in instruction pipelining ? Explain with example. [7]

(*b*) What is register organization ? What are different types of registers ? Explain in detail. [6]

Or

6. (*a*) Explain the instruction cycle in detail. [6]

(*b*) List and explain various ways in which an instruction pipleine can deal with conditional branch instructions. [7]

7. (*a*) Compare horizontal and vertical microinstruction format. [6]

(*b*) Write a control sequence for the following instruction for single bus organization : SUB (R3), R1. [7]

Or

8. (*a*) Compare Hardwired control over micro-programmed control. [6]

(*b*) Explain in detail micro instruction sequencing organization. [7]
