T.E. (Computer Engineering)
THEORY OF COMPUTATIONS
(2019 Pattern) (Semester-I) (310242)

Time : 2½ Hours]

[Max. Marks : 70

Instructions to the candidates:

- 1) Answer Q1 or Q2, Q3 or Q4, Q5 or Q6, Q7 or Q8.
- 2) Figures to the right side indicate full marks.
- 3) Neat diagrams must be drawn wherever necessary.
- 4) Assume suitable data, if necessary.

Q1) a) Write a grammar G for generating the language [9]

- i) $L = \{w \text{ belongs to } \{a,b\}^* \mid w \text{ is an even length palindrome with } |w| > 0\}$
- ii) Set of odd length strings in $\{0,1\}^*$ with middle symbol '1'

b) Simplify the following grammar [9]

$$\begin{aligned} S &\rightarrow 0A0|1B1|BB \\ A &\rightarrow C \\ B &\rightarrow S|A \\ C &\rightarrow S|\epsilon \end{aligned}$$

OR

Q2) a) Reduce the following grammar to Greibach Normal form. [9]

$$\begin{aligned} S &\rightarrow AA \mid 0 \\ A &\rightarrow SS \mid 1 \end{aligned}$$

b) Construct a DFA for the following left linear grammar. [9]

$$\begin{aligned} S &\rightarrow B1/A0/C0 \\ B &\rightarrow B1/1 \\ A &\rightarrow A1/B1/C0 \\ C &\rightarrow A0 \end{aligned}$$

Q3) a) Construct a context free grammar which accepts N(A), where [9]

$$\begin{aligned} A &= (\{q_0, q_1\}, \{0, 1\}, \{Z_0, Z\}, \delta, q_0, Z_0, \varphi) \text{ where } \delta \text{ is given by} \\ \delta(q_0, 1, Z_0) &= \{(q_0, ZZ_0)\} \\ \delta(q_0, \epsilon, Z_0) &= \{(q_0, \epsilon)\} \\ \delta(q_0, 1, Z) &= \{(q_0, ZZ)\} \\ \delta(q_0, 0, Z) &= \{(q_1, Z)\} \\ \delta(q_1, 1, Z) &= \{(q_1, \epsilon)\} \\ \delta(q_1, 0, Z_0) &= \{(q_0, Z_0)\} \end{aligned}$$

- b) Construct a PDA that accept the language generated by grammar [8]
- $S \rightarrow 0S1 | A, A \rightarrow 1A0 | S | \epsilon$
 - $S \rightarrow aABB | aAA, A \rightarrow aBB | a, B \rightarrow bAA | A$

OR

- Q4)** a) What is NPDA? Construct a NPDA for the set of all strings over {a,b} with odd length palindrome. [9]

- b) Design a push down automaton to recognize the language generated by the following grammar: [8]

$$S \rightarrow S + S \mid S \square S \mid 4 \mid 2$$

Show the acceptance of the input string $2 + 2^*4$ by this PDA.

- Q5)** a) What is a Turing Machine? Give the formal definition of TM. [9]
Design a TM that replaces every occurrence of abb by baa.

- b) What are the different ways for extension of TM? Explain. [9]
Design TM for language $L = \{a^i b^j \mid i < j\}$

OR

- Q6)** a) What is TM? Design TM to check well formedness of Parenthesis. Expand the transition for $((())()$ [9]

- b) Elaborate the following terms [9]
 - Universal Turing Machine (UTM)
 - Recursively Enumerable Languages
 - Halting Problem of Turing Machine

- Q7)** a) Justify “Halting Problem of Turing machine is undecidable”. [9]

- b) Define the Class P and Class NP and Problem with their example in detail. [8]

OR

- Q8)** a) Explain Satisfiability Problem and SAT Problem and comment on NP Completeness of the SAT Problem. [9]

- b) What do you mean by polynomial time reduction? Explain with suitable example. [8]
